## **DETAILED ACTION**

### ***Election/Restrictions***

A telephone call was made to Mr. Sweeney on 6/20/08 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-38 and 47-54, drawn to A blade/plurality of blades for cutting a drive belt, classified in class 407, subclass 113.

II. Claims 39-46 drawn to A plurality of cutting tools ganged together on a common arbor, classified in class 407, subclass 31.

The inventions are distinct, each from the other because of the following reasons:

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, Group I does not require the cutting tools to be ganged together on a common arbor t (i.e. can utilize a single rotary tool body with removable inserted cutting blades.)

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

There is an excessive burden on the office to examine all of these inventions together, as shown by their search. See MPEP (808.02(C). For example, the

apparatus of Group I will need to be searched in class 82, subclass 1.11, along with a unique text search. Group II would not be searched as above, but would instead be searched in class 142, subclass 15 accompanied by a different text search.
